

CLAIM 1: A medical device transportation unit comprising an upper compartment, a center compartment and a lower compartment, said compartments having a front panel, a rear panel and two opposite side panels, a shelf between said upper compartment and said center compartment, a shelf between said center compartment and said lower compartment, the front panel or panels being movable between an open and a closed position, to expose the inside of said compartments.

CLAIM 2: The transportation unit of Claim 1 in which the front panel of said upper compartment, the front panel of said lower compartment, and all four panels of said center compartment are removably attached.

CLAIM 3: The transportation unit of Claim 1 further comprising a retractable handle.

CLAIM 4: The transportation unit of Claim 1 further comprising handles on both side panels of the upper compartment.

CLAIM 5: The transportation unit of Claim 1 further comprising handles on both side panels of the upper compartment and both side panels of the lower compartment.

CLAIM 6: The transportation unit of Claim 1 in which all of the

removable panels are attached to said unit by zippers, snaps, or hook and loop fasteners.

CLAIM 7: The transportation unit of Claim 1 further comprising two wheels attached to the bottom of the unit.

CLAIM 8: The transportation unit of Claim 1 in which all of said movable panels are attached along one edge by a flexible hinge.

CLAIM 9: The transportation unit of Claim 1 further comprising tie-down straps removably attached to said shelves.

CLAIM 10: The transportation unit of Claim 1 in which one or more of said shelves has an opening therein.

CLAIM 11: The transportation unit of Claim 1 in which the entire front of the unit is movable from a closed position to an open position, exposing all of said compartments.

CLAIM 12: The transportation unit of Claim 11 in which the front of the unit is attached along one edge by a flexible hinge.

CLAIM 13: The transportation unit of Claim 11 in which the front of the unit has a movable flap opposite each compartment, each said flap being movable from a closed to an open position.

CLAIM 14: The transportation unit of Claim 11 in which the front of the unit is held in the closed position by a zipper, snaps or hook and loop fasteners.

CLAIM 15: The transportation unit of Claim 13 in which each flap is held in the closed position by a zipper, snaps or hook and loop fasteners.

CLAIM 16: The transportation unit of Claim 1 in which each of said shelves is a grate.

CLAIM 17: The transportation unit of Claim 16 in which each grate has an opening cut-out.

CLAIM 18: The transportation unit of Claim 11 in which the side and rear panels are not movable.

CLAIM 19: The transportation unit of Claim 18 further comprising flaps on each side panel of the center compartment, said flaps movable between a closed and open position.

CLAIM 20: A continuous positive airway pressure machine transporting unit comprising an upper compartment, a center compartment and a lower compartment, all said compartments having a front panel, a rear panel and two opposite side panels, a

grated shelf between said upper compartment and said center compartment, a grated shelf between said center compartment and said lower compartment, both said shelves having an opening cut therein, the front panel of said upper compartment, the front panel of said lower compartment and all four panels of said center compartment being removably attached.

CLAIM 21: A continuous positive airway pressure machine transporting unit comprising an upper compartment, a center compartment and a lower compartment, all said compartments having a rear panel and two opposite side panels, a solid shelf between said upper compartment and said center compartment, a solid shelf between said center compartment and said lower compartment, both said shelves having an opening cut therein, a solid shelf at the bottom of the lower compartment, a front panel movable from a fully open position to a fully closed position to cover the entire front of the unit, said front panel attached to the bottom shelf by a flexible hinge.
